

Don't take it personally

Office jobs often come with perks like shiny new laptops, tablets, or smartphones to work from. But people tend to treat these devices like their own, taking liberties that compromise the fabric of company security.

Confidential file syphoning

There's no question that sensitive company documents shouldn't be pulled from a secure enterprise workspace. But that's exactly what over half of employees are doing.

of employees admit to using personal laptops, tablets, and smartphones to store, share, and work on company documents

Moving into dangerous neighborhoods

Make no mistake about it. Company documents are living, breathing, and multiplying on the personal devices employees carry around every day — always in danger of loss, theft, and prying eyes.
